

Press Release-For Immediate Release

**Meucci Solutions takes care of an efficient implementation
of the roaming agreements for Digicel Suriname**

Ghent, 30 October 2007. – Meucci Solutions, the mobile network quality monitoring specialist based in Belgium, have signed a contract for the testing and implementation of the roaming agreements for Digicel Suriname, one of the extended networks of Digicel Group in the South American region.

Meucci Solutions will provide Digicel with an end-to-end solution encompassing all testing and internal implementation of roaming agreements. In this scenario, the Digicel group can fully concentrate on the commercial relationship with its new roaming partners, while Meucci Solutions guarantees a fast and efficient roll out of the required testing, before launching its roaming agreements commercially.

Each partner can focus on their core-business

Meucci Solutions will take care of all IREG tests, a set of technical tests performed by a mobile operator to enable their network to communicate with the network of the roaming partner. These tests verify, amongst others, the settings for voice (IR24), Camel (IR32) and GPRS (IR35). It is only when all settings for both partners of the roaming agreement have been successfully tested, that the partner networks can communicate with each other.

Next to the IREG tests, Meucci Solutions will perform the TADIG tests, necessary to guarantee the correct billing of all communication between the partner networks. At the end of a successful test cycle, Meucci Solutions issues the certificate allowing Digicel to launch the roaming agreements commercially.

To run the tests, Meucci Solutions will utilize its own Global Testing and Monitoring Platform, a network of over 60 probes active in 53 countries, and still expanding.

“This contract is the perfect example of the added value we offer our customers. We use our proper network and take over the entire technical aspect and the co-ordination of the implementation. Through standard and extensive reports, Digicel is kept up to date on the most recently progress. Digicel can concentrate on their core business, being the commercial aspect of the roaming agreements, whilst we focus on what we do best: the technical aspects and co-ordination of the implementation” says Conrad Tuytte, CEO of Meucci Solutions

Mario Castro, Senior Roaming Coordinator, Digicel: *"Digicel chose Meucci Solutions because we require their expertise, system integration and broad knowledge to achieve a fast roaming footprint in new territories by outsourcing a team focused in testing."*

The Digicel Group

Digicel was founded in 2001 by the successful telecommunications entrepreneur Denis O'Brien, who established Esat Telecom in Ireland. From its home country Jamaica, Digicel developed into the fastest growing wireless carrier in the Caribbean, now operating in 22 countries.

Soon Digicel is to launch its 23rd network in Suriname. Meucci Solutions will assist Digicel to deploy as quickly as possible the roaming agreements with the other members of the Digicel Group.

About Meucci Solutions

Meucci Solutions offers a unique suite of value-adding services to monitor, test and analyze roaming, interconnection and fraud. The product portfolio includes total solutions such as SIM box detection and roaming implementation, monitoring solutions such as VoIP business monitoring, and roaming and interconnect quality of service monitoring. The service-oriented approach minimizes the operational impact on the customers. All of the products and services are based on the Global Monitoring and Testing Platform of Meucci Solutions, a network of over 60 probes which is currently active in 60 countries and is continuing to expand.

About Digicel

Digicel, currently prides itself on providing customers with unrivaled coverage locally, providing nearly 100 percent of network coverage throughout its countries of operation. With close to 5 million customers, they are now, with the assistance of Meucci Solutions, expanding this coverage worldwide.
